

ABS Level I Basic

ABS General

Version 2.0

Agenda

- 1 Introduction
- 2 ABS history
- 3 ABS Core modules
- 4 Summary

Contents of the module

What can you expect in this unit?

You get an insight into:

basic properties of ABS

historic development of ABS

ABS Core modules and the principle of continuous Core extension

ABS is an inventory management system used globally within the Allianz group

2

- 1** Introduction
- 2** ABS history
- 3** ABS Core modules
- 4** Summary

Definitions

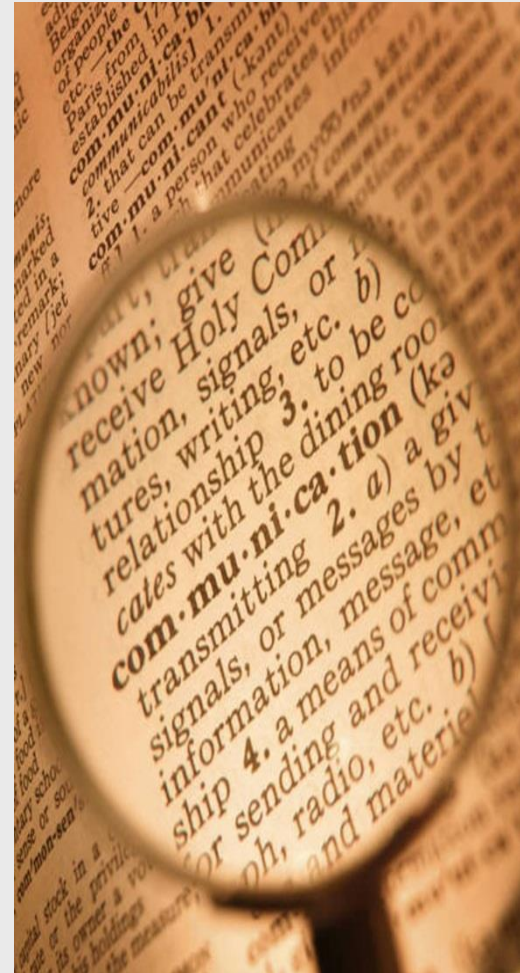

What does ABS mean?

ABS stands for “**A**llianz **B**usiness **S**ystem“ and it was developed by Allianz Elementar Versicherung in Austria under the name “**G**eschäfts**F**all**B**earbeitung” (**GFB**).

ABS is an all-class system for managing non-life, health and life insurances.

ABS can be used in the back office and as a sales system for the sales force.

ABS can be operated “online” as well as “offline”.

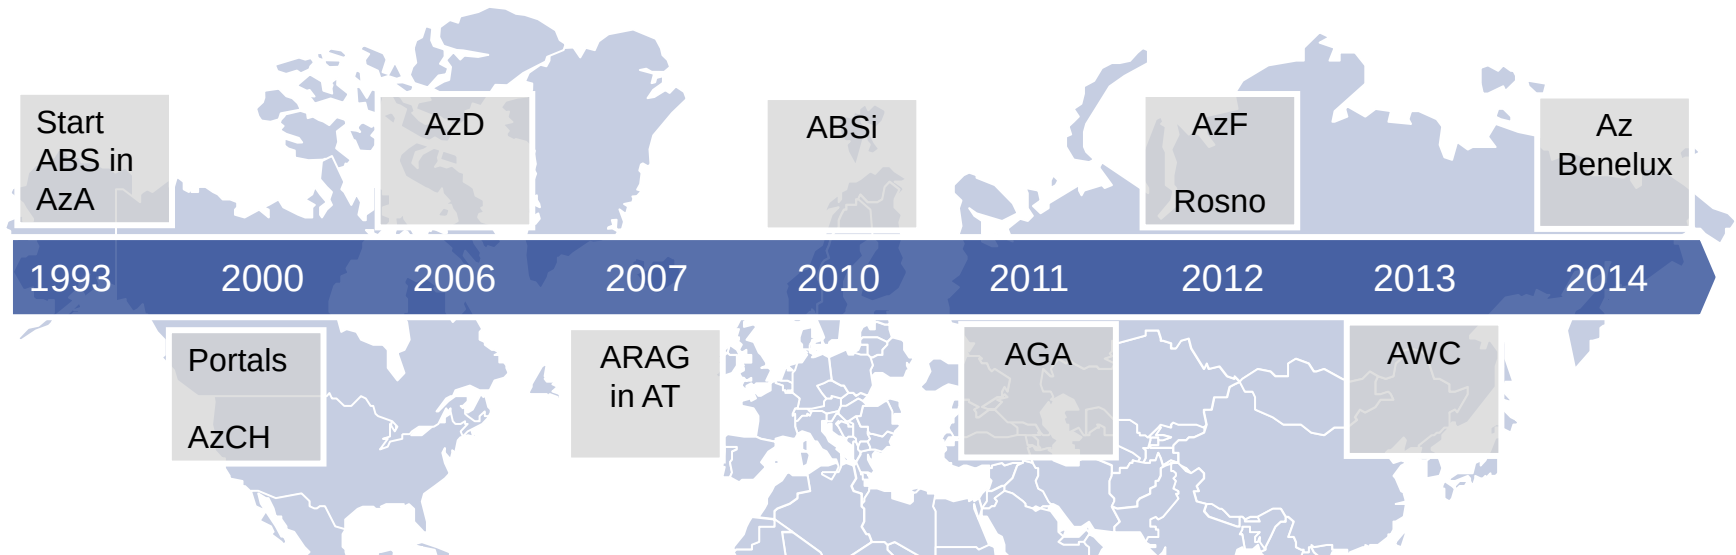

3

- 1 Introduction
- 2 **ABS history**
- 3 ABS Core modules
- 4 Summary

Milestones of ABS customer implementations

How did the success story of ABS implementation start?

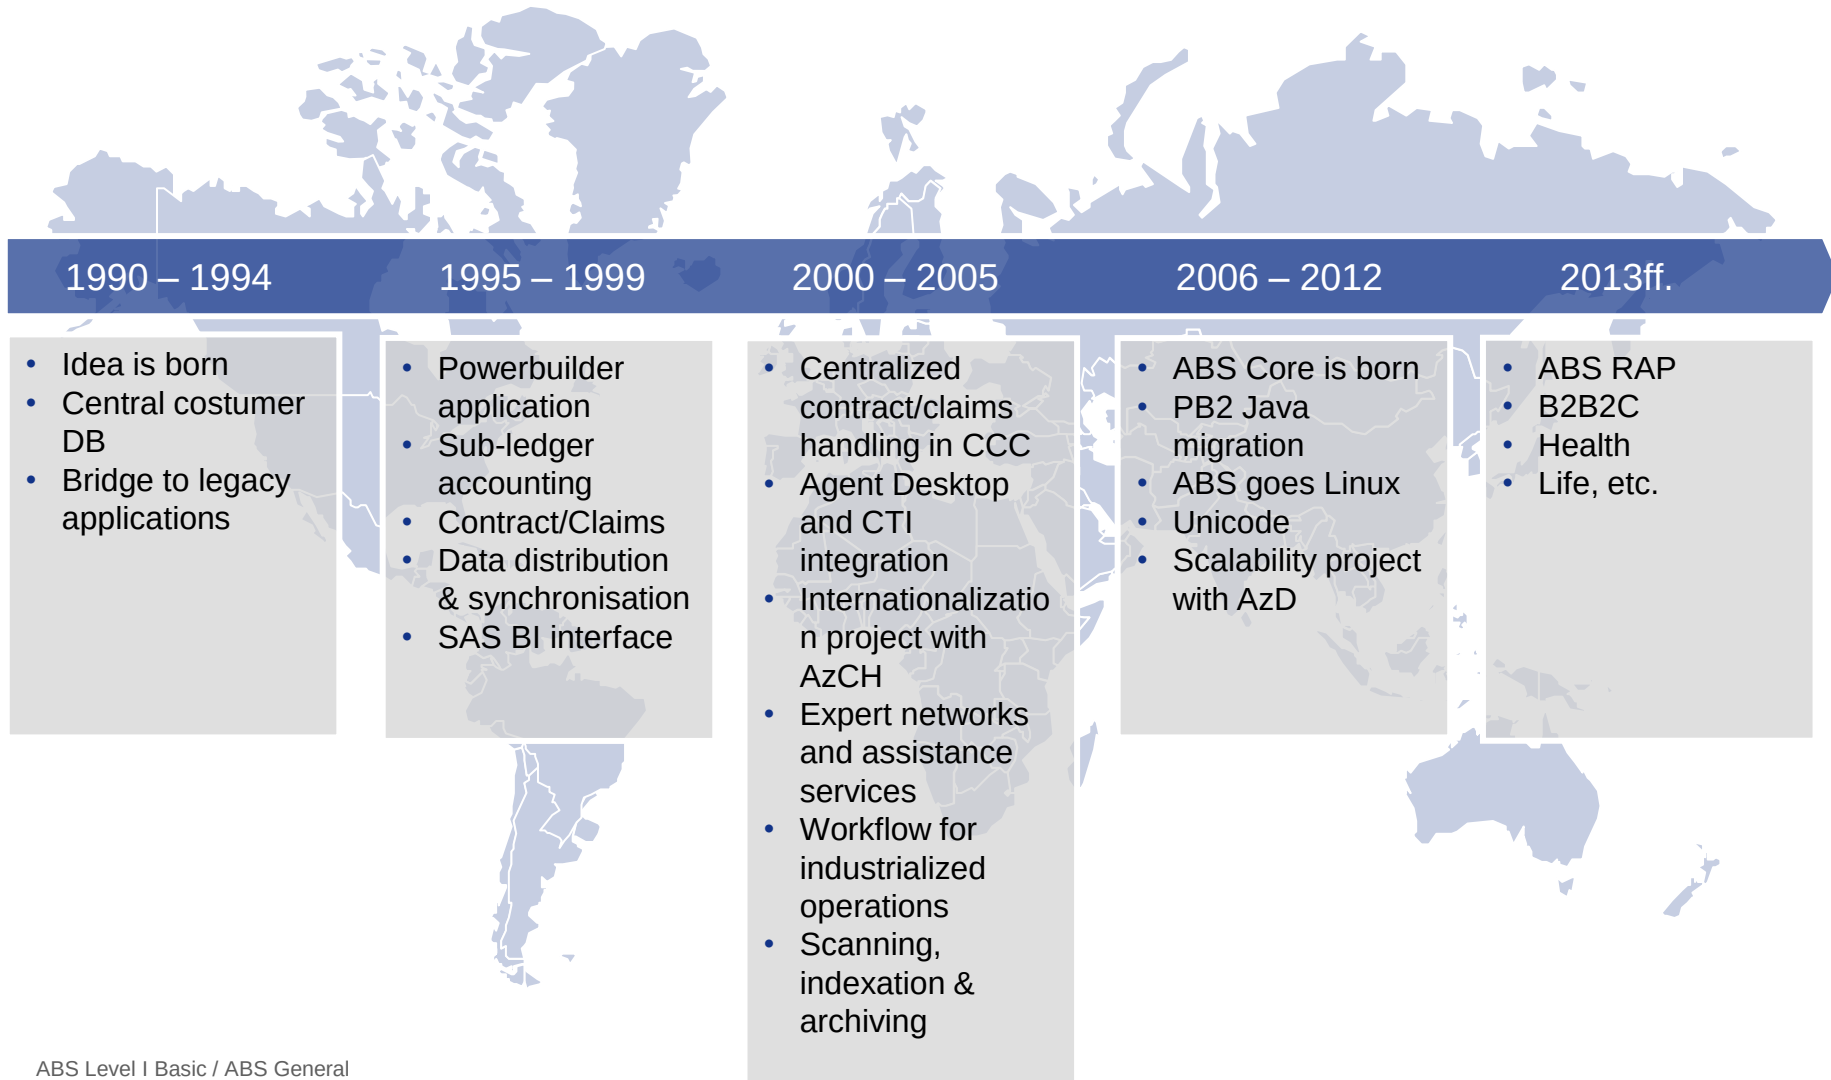

Some customer implementations

ABSi	ABS for partners from the automotive industry in Germany (VW, BMW, Ford)
AGA	Allianz Global Assistance (20 countries worldwide)
AWC	Allianz Worldwide Care (Ireland)

Milestones of technical development of ABS

How did technical development affect ABS optimisation during the course of time?

Technical development (1)

How did technical development affect ABS optimisation during the course of time?

From 1993: ABS based on APES framework basis	▪ Client/server application based on PowerBuilder (4GL)
From 1998: A2k-Framework (APES 2000)	▪ Separation of layers ▪ company-wide data model ▪ ORBIT (C++)
From 1999: ABS for different customers	▪ Generic extension concepts for customer-specific adaptations
2005: Technology change	▪ Business logic based on Java (POJOs, Java 4) ▪ GUI furthermore PowerBuilder
2004 – 2006: New architecture A3K	▪ Business logic based on Eclipse RCP and Java 5 ▪ GUI furthermore PowerBuilder

Technical development (2)

How did technical development affect ABS optimisation during the course of time?

From 2007:
Revised
architecture A3k+

- A2k is wrapped via a modern API
- Wrapper is A3k+
- Customer settles down for “A3k+” API
- GUI furthermore PowerBuilder

From November
2008: A3k+ based
on Java
technologies

- GUI is migrated to Java/SWT
- JEE-compliance achieved (only few remaining native codes)

Today

- Revised GUI framework (data binding)
- New web framework (based on RichFaces, Spring Webflow)
- Revised ORBIT (aim: JPA, to change to e.g. Hibernate)
- Conversion to Eclipse-RCP mechanisms like e.g. Commands

Current Core applications and Core portals

Which ABS portfolio of application and portals can be accessed?

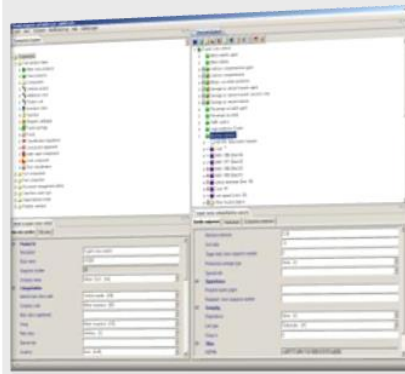

ABS Core Rich Client

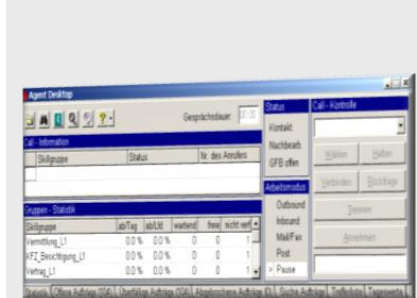

ABS Configuration Suite

Product Explorer (PEX)

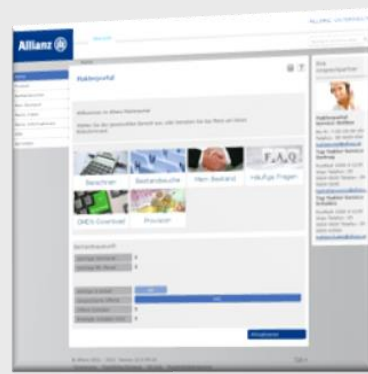

Agent Desktop

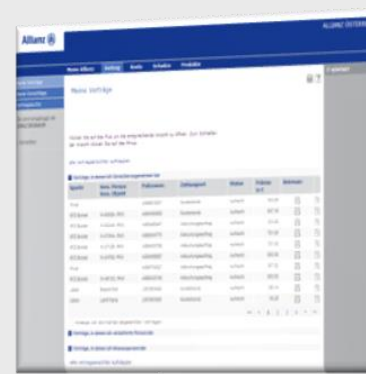

ABS Portal

ABS Broker Portal

ABS Direct Portal

ABS Partner Portal

4

- 1 Introduction
- 2 ABS history
- 3 **ABS Core modules**
- 4 Summary

Modules of inner and outer Core

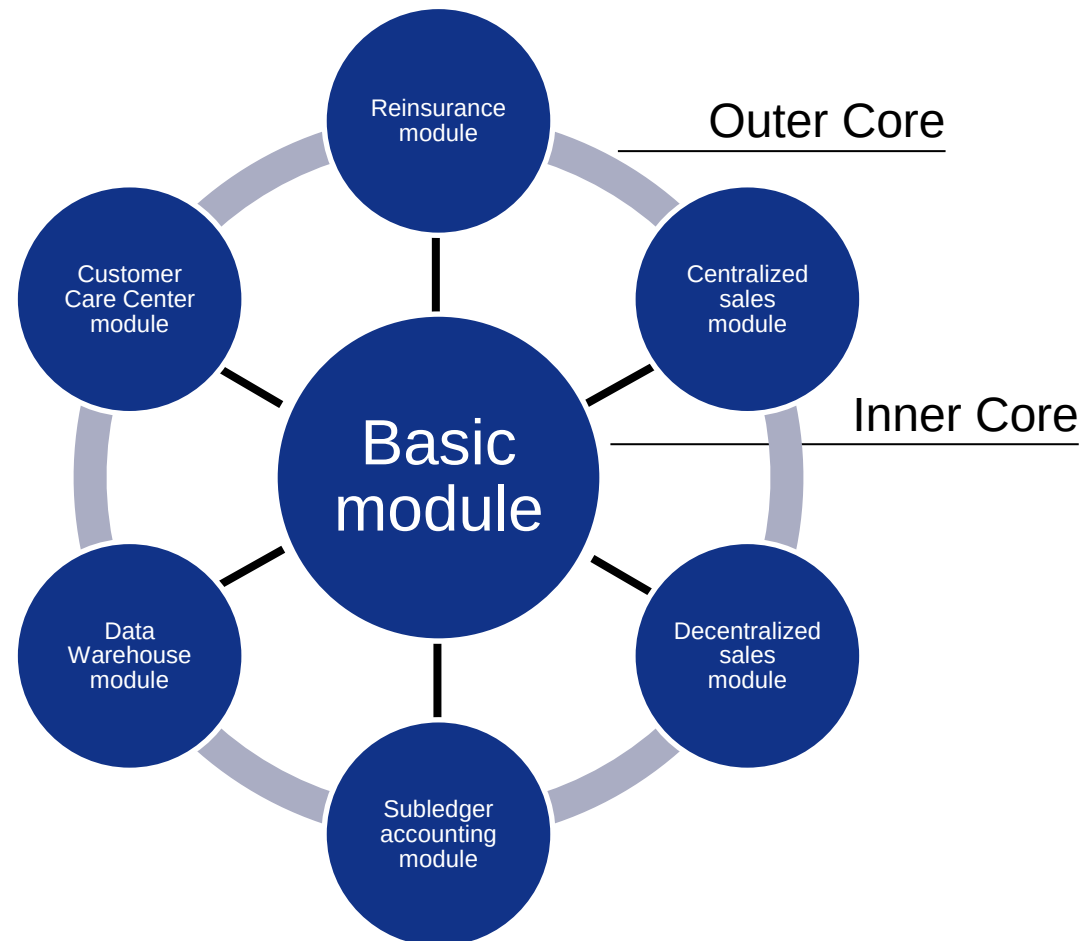

How is ABS core divided?

ABS consists of a (mandatory) inner and an (optional) outer Core.

Inner core (basic module) with the basic functionalities is an essential component and mandatory part of every ABS implementation

Outer core consists of six optional components, which can be used as an extension of the basic module for a specific functional area.

Functionalities of the basic module can only be extended via interfaces by ABS customers, but can never be replaced fully. Functionalities of the outer core can be replaced fully by ABS customers.

Core modules 1/3

Which modules can you find in the core?

Basic module (mandatory)

- Contains basic functionalities (i.e. person, contract, claim, workflow, ...), as well as maintenance applications and interfaces

Reinsurance module (optional)

- Contains all functionalities to carry out active and passive reinsurance
- Settlement via insurance accounts
- Possible cumulative risk calculation in ABS.
- Maintenance application to define basic data for passive reinsurance.

Central sales module (optional)

- Contains all functionalities which are required for defining and maintaining insurance agents in ABS including maintenance of broker data and management of commission accounts
- Access to commission and payment accounts of the sales branches
- Application for the management of defining data for commissions.

Core modules 2/3

Which modules can you find in the core?

Decentralised sales module (optional)

- Contains all functionalities for data synchronisation of ABS data to decentralised databases
- Functionalities for data synchronisation with the sales force's notebooks
- All functionalities to support the sales force regarding customer care

Subledger accounting module (optional)

- Contains all functionalities for managing subledger accounts e.g.
 - Collection/Disbursement processes including cancellation
 - Interfaces for payment and main ledger systems, reminder process
 - Preparation of legal proceedings.

Core modules 3/3

Which modules can you find in the core?

Data Warehouse module (optional)

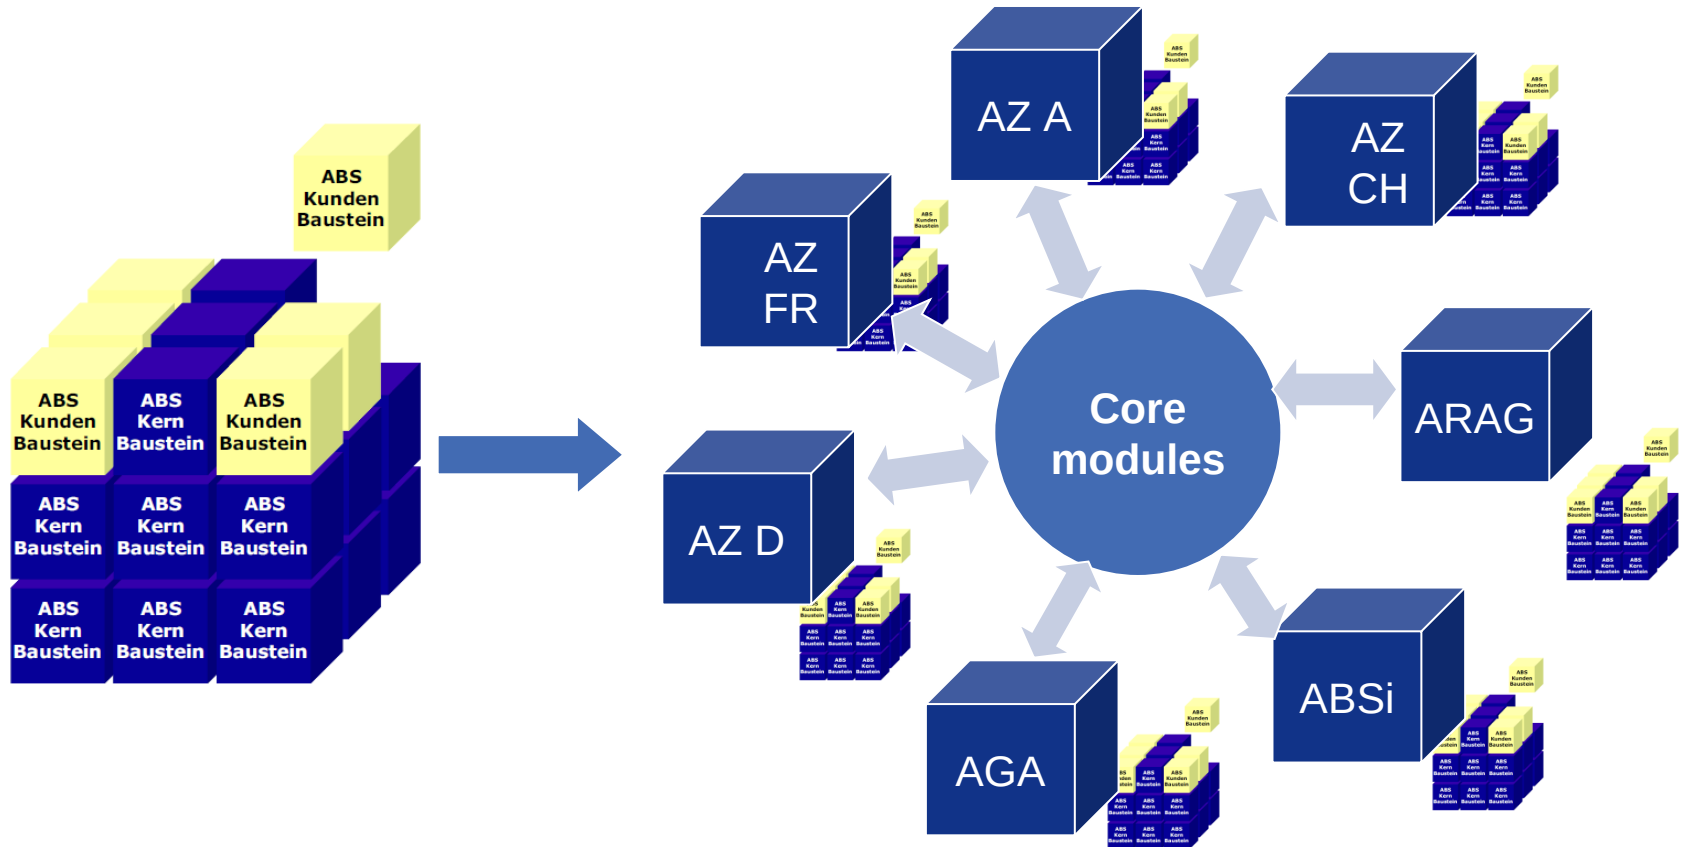

- Defines and fills an interface with ABS data for further analysis via a customer-specific DWH solution
- This interface contains data related to persons, objects, contracts, claims, assignments and feedback. Additionally, data are collected for calculating KPAs.

Customer Care Center module (optional)

- Contains telecommunication software “Agent desktop” and the corresponding interface for ABS Core.

The principle of continuous extension

What is meant by the principle of continuous extension?

ABS follows the principle of continuous extension. Once an extension becomes necessary for several customers, it is integrated into the Core. Responsibility for the functionality and further development of ABS Core is with the Core Competence Center (ABS-CCC)

5

- 1 Introduction
- 2 ABS history
- 3 ABS Core module
- 4 **Summary**

Summary

What should we keep in mind?

You should now have knowledge about the following:

basic features of ABS

historic development of ABS

structure and contents of the “Inner” and the “Outer” Core

the principle of continuous extension

Sample test question

This module is not test-relevant
