

ABS Level I Basic

Claim

Version 2.0

Agenda

- 1 Introduction
- 2 Claim handling process
- 3 Functional object Claim
- 4 Summary

Contents of the module

What can you expect in this unit?

You get an insight into:

Interaction of Claim with other functionalities in ABS

Claim handling process within the claim file

Functional object Claim in the ABS data model

IT architecture (A3K Framework, Client and Batch)

The Functional object claim supports all processes required for processing a claim in ABS. For this, the claim module uses many cross-cutting functions and also accesses the basic functions.

1

1 Introduction

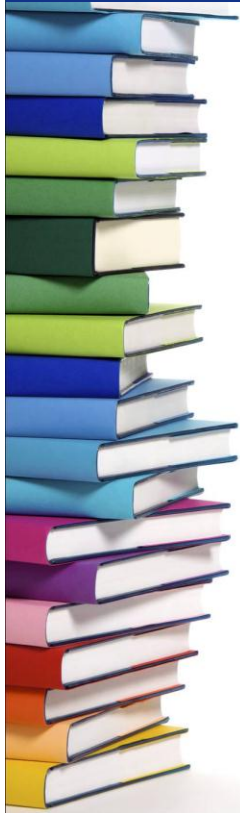

1.1. General principles of claim processing

1.2 Relation to other ABS components

2 Claim handling process

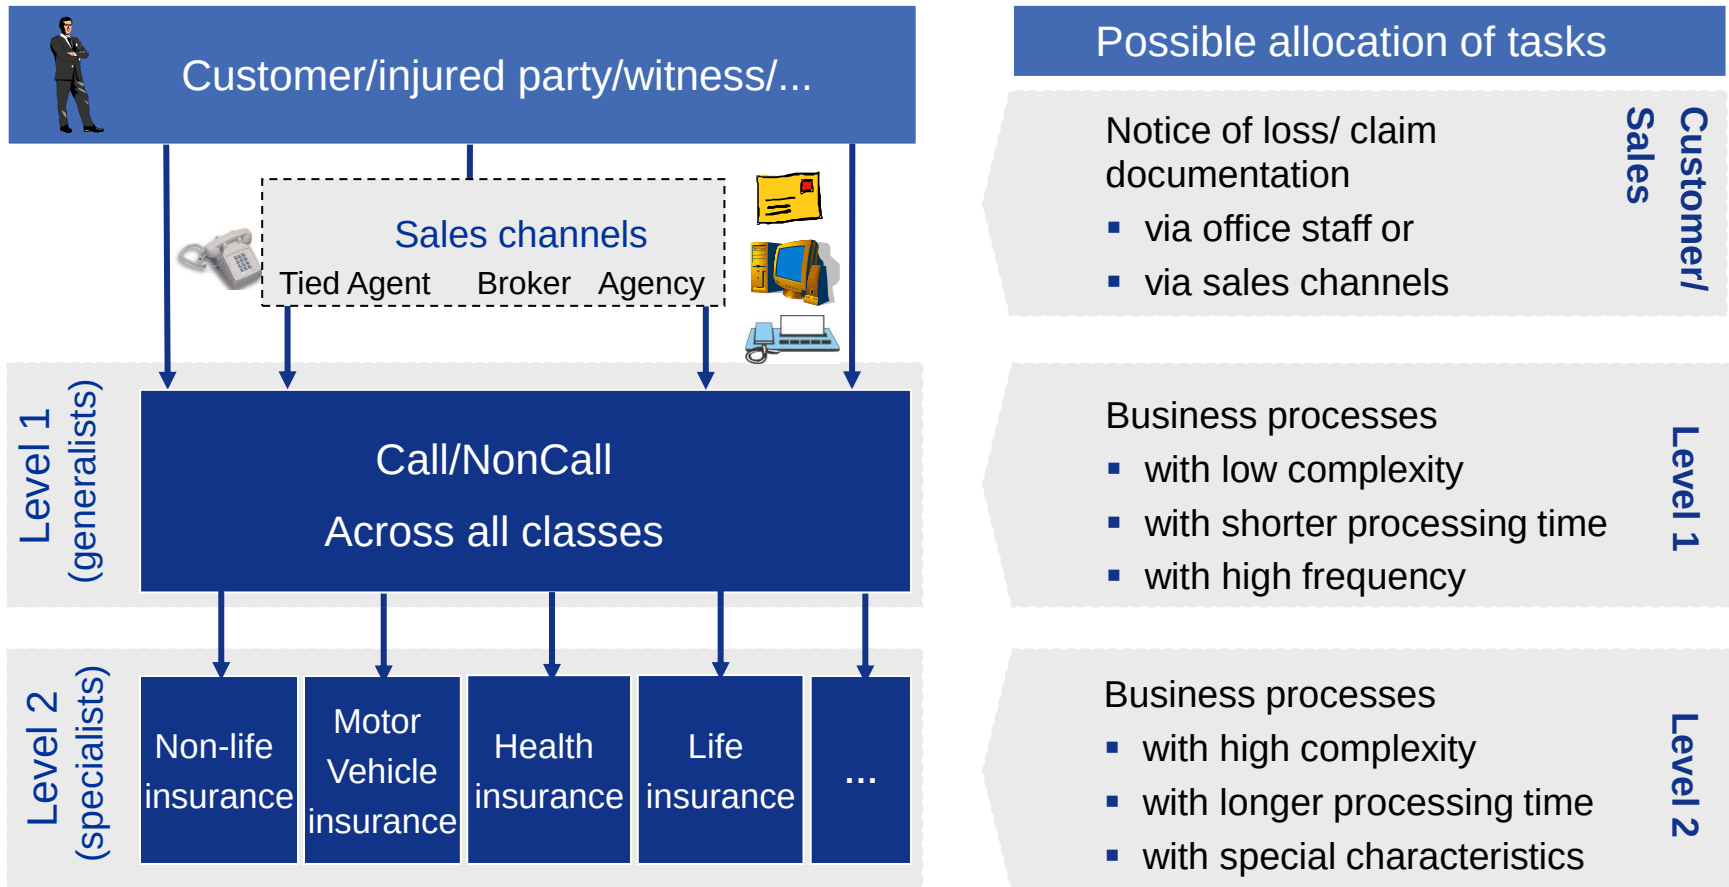

3 Functional object Claim

4 Summary

Example - organisational process of claim processing

How is claim processing organised?

Through a uniform structure of the claim file across classes, ABS supports easy customizing of work load distribution according to the organizational structure of the insurance company.

Recommendations for claim processing

What are the specifications according to which claim processing should take place?

Central processing of claims

The majority of the claims has to be brought to conclusion within one organizational unit.
(Target AOM: ~80%)

Only claims with high complexity and higher time requirements are to be forwarded for further processing to a specialist team. (Target AOM: ~20%)

Standardised processing across classes

The system for claim processing is to be designed uniformly across classes and contain only few class-specific peculiarities.

Standardised processes within claim processing are to be defined.

When creating teams and while training the employees, it should be kept in mind that a reassignment of clerks to other teams should be possible (e.g. in case of mass claims)

ABS provides a uniform file across classes for processing claims and thus supports the option of central and standardised claim processing according to AOM.

Team-based vs. personalised processing

How can claim processing be executed?

Team-based processing (team responsibility)

Is frequently used for mass classes

Same basic skills are required within the team

Work orders are allocated by the team leader (push) or clerk himself (pull)

Allocation of claims to team members are only temporarily

Allocation is deleted automatically after completion of the work order.

Personalised processing (personal responsibility)

E.g. for special classes, complex benefit payment check, VIP-broker customer care

Claim is assigned to a specific clerk

The assigned clerk is responsible for the entire handling.

Relation claim and other components 1/2

What is the relation between claim and other ABS basic functions?

Person

- Existing persons in ABS can be assigned to a claim or re-created directly from the claim file.
- All persons assigned to the claim must get at least one role in the claim in which they are involved.
- Involved persons can have up to 4 different roles simultaneously (e.g.: driver, owner, causer).
- Specific persons from the contract are taken over in the claim together with their role as involved person (e.g.: policy holder, insured person)

Contract

- A claim is created for a coverage.
- If a loss event concerns several coverages for a contract, several claims must be created. (e.g.: liability and motor accident insurance)
- Important contract information is used with the historical status corresponding with the date of damage in the claim file for display and verification of coverage.

Relation of claim and other components 2/2

What is the relation between claim and ABS cross-cutting functions?

Product

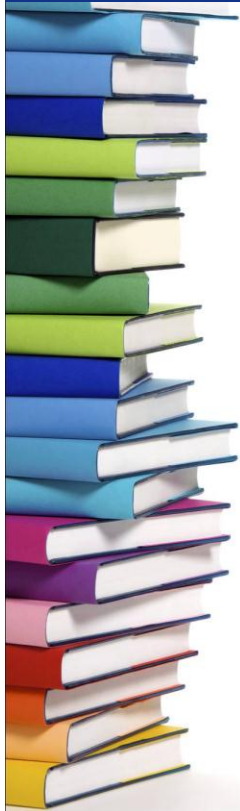

- Modelling of claim types (e.g. with collision with motor vehicle), loss causes (e.g. rear-end collision) and effect of loss event,
- allocation of possible benefits classifications which may comprise a booking for the claim (e.g. calculated repair costs)
- Parameterization for systematic file review (Open file review, Closed file review)
- Definition of claim and event questions
- Categorisation of claim processing
- Text components for letters (print) can be defined for the product

Organisation

- Mapping hierarchy of claim team within the organizational structure (e.g.: first level, second level) for use in the claim routing area and claim escalations (process slip, scheduled tasks)
- Configuration of the authorization bundle for processing the claims by taking into consideration the allocation of tasks within the team
- Provision of limit values for input as well as approval of bookings for claim (e.g. for payments).

 - 2.1 Overview
 - 2.2 Document & Investigate
 - 2.3 Evaluate
 - 2.4 Settle
 - 2.5 Conclude
 - 2.6 Quality Assurance
- 3 Functional object Claim
- 4 Summary

Overview of the claim process

How is ABS claim meta process defined?

The sequence of tabs within the claim file follows the claim meta process. Closing the claim marks the conclusion of claim processing.

Document & Investigate

What happens in the Document & Investigate step?

Document & Investigate

Collection and fetching of all required data for further claim processing particularly for coverage and liability check and settlement.

Several event descriptions can be stored in the system (e.g. several witnesses for an accident)

In case of several claims for a contract, there is an automatic notification for a duplicate claim check within a period of 9 days

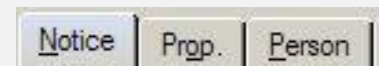

First estimation takes place based on the registered claim data and entry of reserve/provision.

After registration of data, first message is created if required (automatically if necessary)

At this point there is no evaluation concerning the coverage.

Data are entered in the top tabs:

Notice, property, person

Creating a claim in ABS

How is a claim documented in ABS?

Claim creation

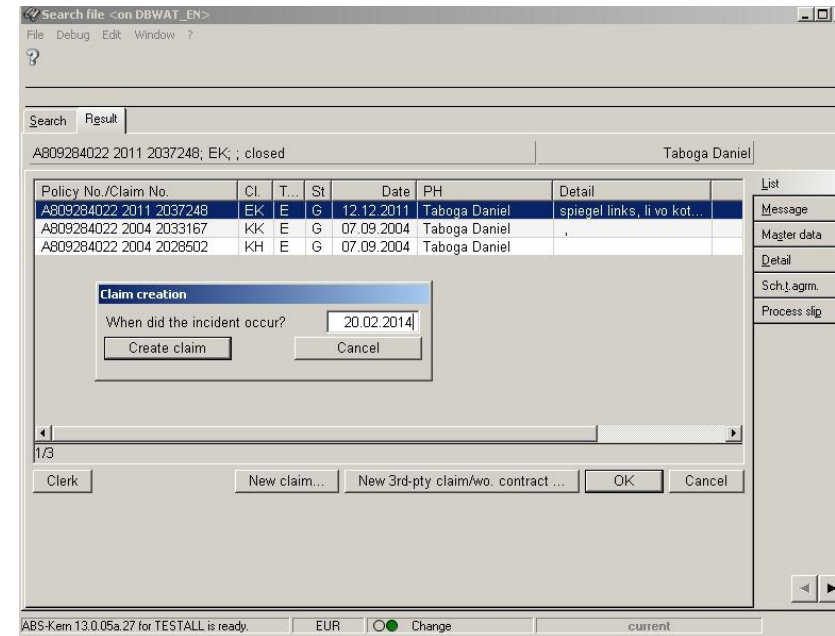

Is generally done only for a contract (stage = 3), exceptions are e.g. third-party claim or “claim without contract”)

Takes place via “New claim” button in:
Results list of contract search
Contract list within a file

Duplicate claim check

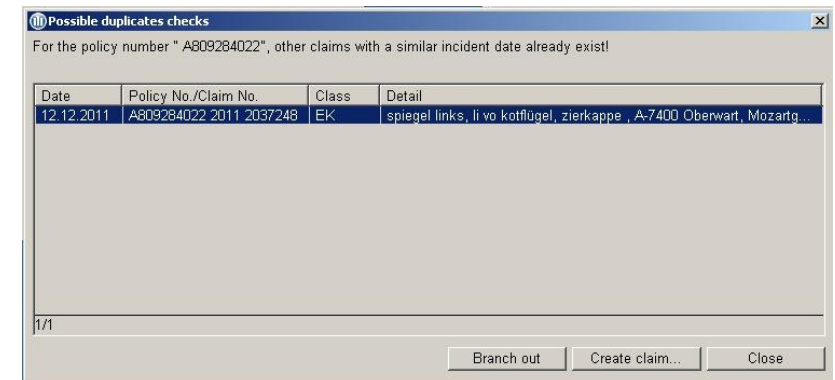

When entering or changing the date of the incident, it is checked whether a claim was already reported for the selected contract within a period of 9 days.

The clerk has the option of branching out to an existing claim or creating a new one.

The screenshot shows the ABS software interface. At the top, there is a search bar with the text "A809284022 2011 2037248; EK; ; closed" and the name "Taboga Daniel". Below this is a table with columns: Policy No./Claim No., Cl., T..., St, Date, PH, Detail, and List. The table contains three rows of data. A "Claim creation" dialog box is open in the center, asking "When did the incident occur?" with a date field set to "20.02.2014". The dialog has "Create claim" and "Cancel" buttons. At the bottom of the interface, there are buttons for "Clerk", "New claim...", "New 3rd-pty claim/wo. contract ...", "OK", and "Cancel".

Policy No./Claim No.	Cl.	T...	St	Date	PH	Detail	List
A809284022 2011 2037248	EK	E	G	12.12.2011	Taboga Daniel	spiegel links, li vo kot...	Message
A809284022 2004 2033167	KK	E	G	07.09.2004	Taboga Daniel	,	Master data
A809284022 2004 2026502	KH	E	G	07.09.2004	Taboga Daniel		Detail

The screenshot shows a dialog box titled "Possible duplicates checks". It contains the text: "For the policy number 'A809284022', other claims with a similar incident date already exist!". Below this is a table with columns: Date, Policy No./Claim No., Class, and Detail. The table contains one row of data. At the bottom of the dialog, there are buttons for "Branch out", "Create claim...", and "Close".

Date	Policy No./Claim No.	Class	Detail
12.12.2011	A809284022 2011 2037248	EK	spiegel links, li vo kotflügel, zierkappe , A-7400 Oberwart, Mozartg...

Top tab “Notice”

How is a claim documented in ABS?

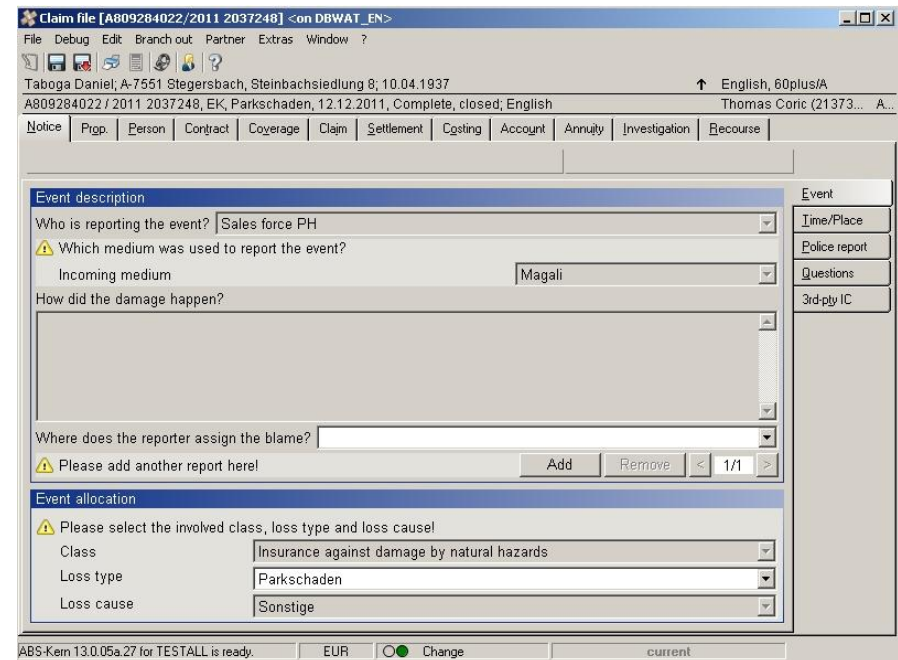

Event allocation (minimum input)

The following data must be documented in order to create a new claim (“minimum claim”):

- Date of incident (at the very beginning)
- Class of the coverage
- Loss type
- Loss cause

Other event description

In addition to mandatory data, various data concerning the reporting of the event, like person reporting the loss, input medium and several event descriptions are documented in this tab.

More details concerning time and location of the loss event or official records can be entered via the side-tabs. The questions side-tab contains loss event queries, which can be defined in product modelling.

Top tab “Property”

How are damaged objects documented?

Affected or damaged objects

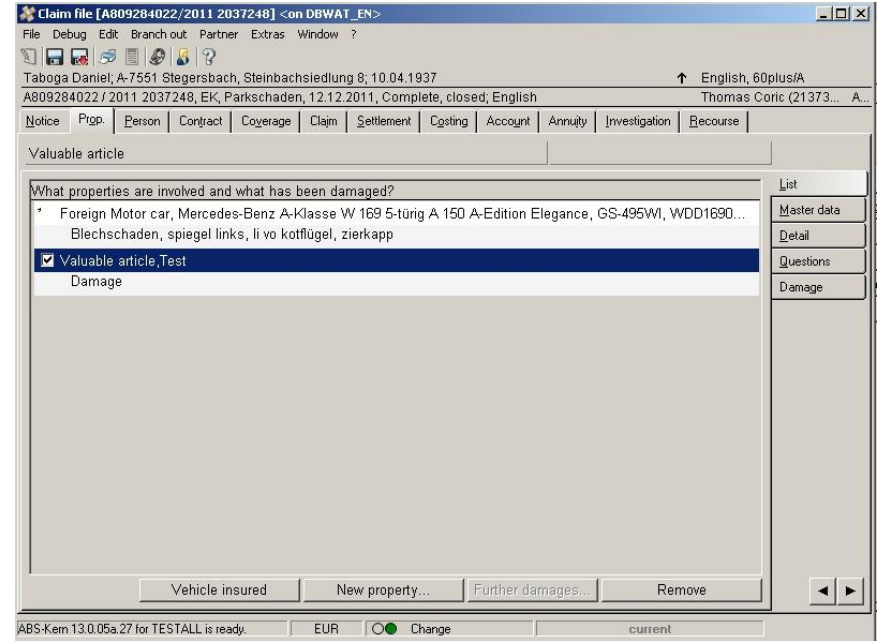

Automatic display and pre-population of all insured objects (e.g. motor vehicle) of the contract.

Creation other damaged objects is possible (e.g. a tree)

In ABS, there are approximately 20 different object types (e.g. motor vehicle, electrical appliance) for describing an object.

Depending on the object type, different detail data are displayed and edited in the master data and detail side-tabs.

Description of damages per created object.

The screenshot displays the 'Claim file [A809284022/2011 2037248] <on DBWAT_EN>' window. The 'Property' tab is active, showing a list of properties under the heading 'Valuable article'. The list includes a 'Foreign Motor car, Mercedes-Benz A-Klasse W 169 5-türig A 150 A-Edition Elegance, GS-495Wl, WDD1690...' with a description of damage: 'Blebschaden, spiegel links, li vo kotflügel, zierkapp'. Below this, a 'Valuable article, Test' entry is selected. The right sidebar contains buttons for 'List', 'Master data', 'Detail', 'Questions', and 'Damage'. At the bottom, there are buttons for 'Vehicle insured', 'New property...', 'Further damages...', and 'Remove'. The status bar at the bottom indicates 'ABS-Kern 13.0.05a.27 for TESTALL is ready.', 'EUR', and 'Change'.

Documentation of affected objects and the damage description are necessary for the following coverage check and creation of assignments for settlement.

Top tab “Person”

How are affected persons documented?

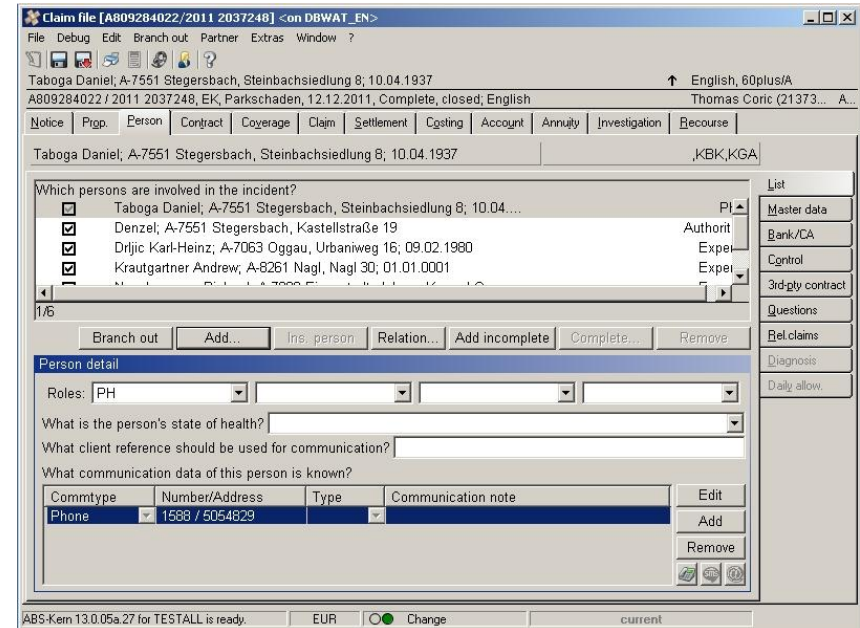

Persons involved in the claim

Automatic transfer of persons with their role from the contract

New persons can be assigned to the claim. If the person is not yet available in ABS, direct creation from the claim file can take place.

Up to four roles can be selected simultaneously per person (e.g. injured party, insured person,...)

Creation of persons with rudimentary data (e.g. for witnesses) is possible (“incomplete creation”) - person data are saved in the claim not in person management

The screenshot shows the 'Claim file [A809284022/2011 2037248] <on DBWAT_EN>' window. The 'Person' tab is active, displaying a list of persons involved in the incident. The list includes:

- Taboga Daniel; A-7551 Stegersbach, Steinbachsiedlung 8; 10.04.1937
- Denzel; A-7551 Stegersbach, Kastellstraße 19
- Drjic Karl-Heinz; A-7063 Oggau, Urbaniweg 16; 09.02.1980
- Krautgartner Andrew; A-8261 Nagl, Nagl 30; 01.01.0001

The 'Person detail' section shows the following fields:

- Roles: PH
- What is the person's state of health?
- What client reference should be used for communication?
- What communication data of this person is known?

The communication data table shows:

Commttype	Number/Address	Type	Communication note
Phone	1588 / 5054829		

The interface also includes a 'List' panel on the right with options like 'Master data', 'Bank/CA', 'Control', '3rd-pty contract', 'Questions', 'Rel. claims', 'Diagnosis', and 'Daily allow.'.

To map ownership relations or compensation claims for damaged objects, it is possible to relate these with the involved persons.

Questions in the claim file

What is the purpose or function of the questions in the claim file?

Use of questions

In the claim file, questions can be used for different purposes.

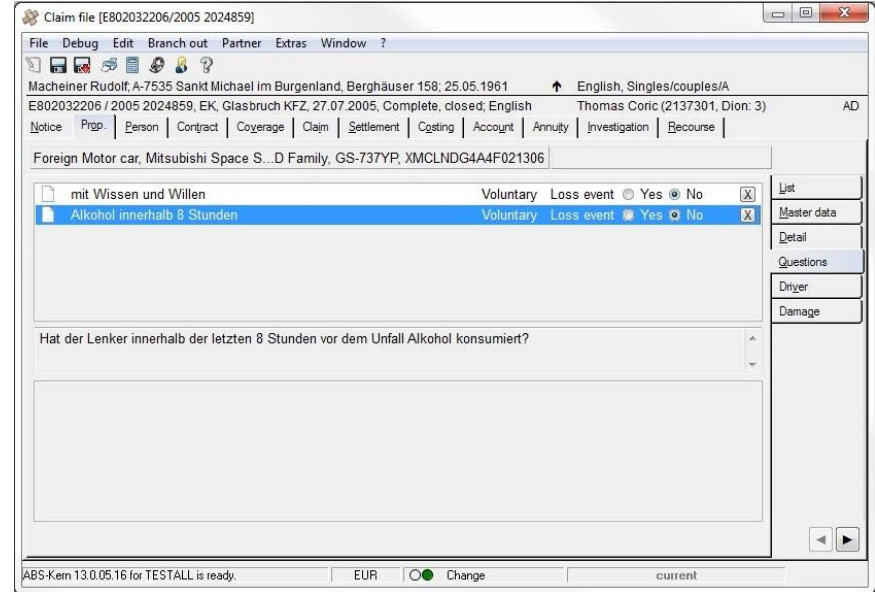

Questions are modelled for the product.
(maintenance via PEX)

Questions can be defined for an event or a claim.

Questions can be defined as general, object or non-life-related.

Questions can be defined optionally or mandatorily.

Definition possible whether “yes”/”no” or a detailed answer is required.

The screenshot shows the 'Claim file [E802032206/2005 2024859]' window. The top menu bar includes File, Debug, Edit, Branch out, Partner, Extras, and Window. The main area displays the claim details for 'Macheiner Rudolf, A-7535 Sankt Michael im Burgenland, Berghäuser 158, 25.05.1961'. Below this, there are tabs for Notice, Prop., Person, Contract, Coverage, Claim, Settlement, Costing, Account, Annuity, Investigation, and Recourse. The 'Investigation' tab is active, showing a list of questions. The first question is 'mit Wissen und Willen' (Voluntary, Loss event, Yes/No). The second question is 'Alkohol innerhalb 8 Stunden' (Voluntary, Loss event, Yes/No). Below the list, there is a text area with the question 'Hat der Lenker innerhalb der letzten 8 Stunden vor dem Unfall Alkohol konsumiert?'. The right sidebar contains a list of options: List, Master data, Detail, Questions, Driver, and Damage. The bottom status bar shows 'ABS-Kern 13.0.05.16 for TESTALL is ready.', 'EUR', 'Change', and 'current'.

Through the possibility of modelling different question types, defined questions can be used for supporting and controlling the claims handling process in a targeted manner.

Evaluate

What happens in the evaluate step?

Evaluate

All activities which are required for checking and determining the total coverage.

Contract data with the contract status at the date of the incident is displayed in the contract top tab

Input option for estimation by the clerk with regard to the existence of breach of obligation or suspected fraud

Check for premium-based coverage (initial premium, subsequent premium)

Check for material coverage (insurance totals, deductible, etc.)

Check for contractual coverage (contract terms and conditions, exclusions, etc.)

After coverage/liability check, the clerk finally enters the evaluation result.

Data are entered in the top tabs:
Contract (read only) and coverage

Top tab “Contract”

Which contract information is available?

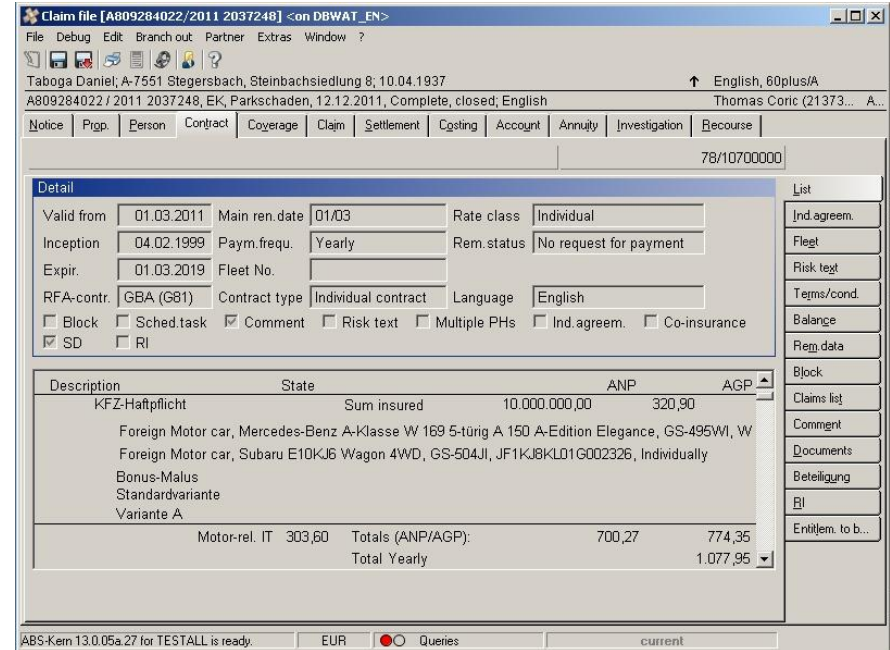

Contract information in the claim

Display of contract data with the historical status at the date of the event.

All side tabs of the contract top tab are only available in the read-only mode, change in data is not possible.

Display of contract information like e.g.:

- Overview of insurance protection
- Contract terms and conditions (“basics”)
- Reminder and account data
- Entitlement for benefits and third party rights
- Documents
- Claim list for the contract

The screenshot shows the Allianz claim file interface for file [A809284022/2011 2037248] on DBWAT_EN. The interface includes a menu bar (File, Debug, Edit, Branch out, Partner, Extras, Window, ?) and a toolbar. The main area displays contract details for Taboga Daniel, A-7551 Stegersbach, Steinbachsiedlung 8, 10.04.1937. The contract is identified as A809284022 / 2011 2037248, EK, Parkschaden, 12.12.2011, Complete, closed, English, with Thomas Coric (21373...) as the agent. The 'Contract' tab is selected, showing a 'Detail' section with fields for Valid from (01.03.2011), Main ren. date (01/03), Rate class (Individual), Inception (04.02.1999), Paym. frequ. (Yearly), Rem. status (No request for payment), Expir. (01.03.2019), Fleet No., RFA-contr. (GBA (GB1)), Contract type (Individual contract), Language (English), and checkboxes for Block, Sched. task, Comment, Risk text, Multiple PHs, Ind. agreem., Co-insurance, SD, and RI. A table below shows the description of the insurance protection, including Kfz-Haftpflicht, Foreign Motor car, Mercedes-Benz A-Klasse W 169 5-türig A 150 A-Edition Elegance, GS-495Wl, W, Foreign Motor car, Subaru E10KJ6 Wagon 4WD, GS-504JI, JF1KJ8KL01G002326, Individually, Bonus-Malus, Standardvariante, and Variante A. The table also shows the sum insured (10.000.000,00), ANP (320,90), and AGP (774,35). The status is Motor-rel. IT 303,60, and the totals (ANP/AGP) are 700,27 / 774,35, with a total yearly premium of 1.077,95. The interface also includes a 'List' section on the right with links to Ind. agreem., Fleet, Risk text, Terms/cond., Balance, Rem. data, Block, Claims list, Comment, Documents, Beteiligung, RI, and Entitlement to b... The bottom status bar indicates ABS-Kern 13.0.05a.27 for TESTALL is ready, EUR, and Queries.

Important contract information for coverage check and evaluation of claim is made available via the top tab “contract”. If more information is required, it is necessary to branch out to the contract file.

Top tab “Coverage”

How does coverage and liability check take place?

Coverage check of the claim

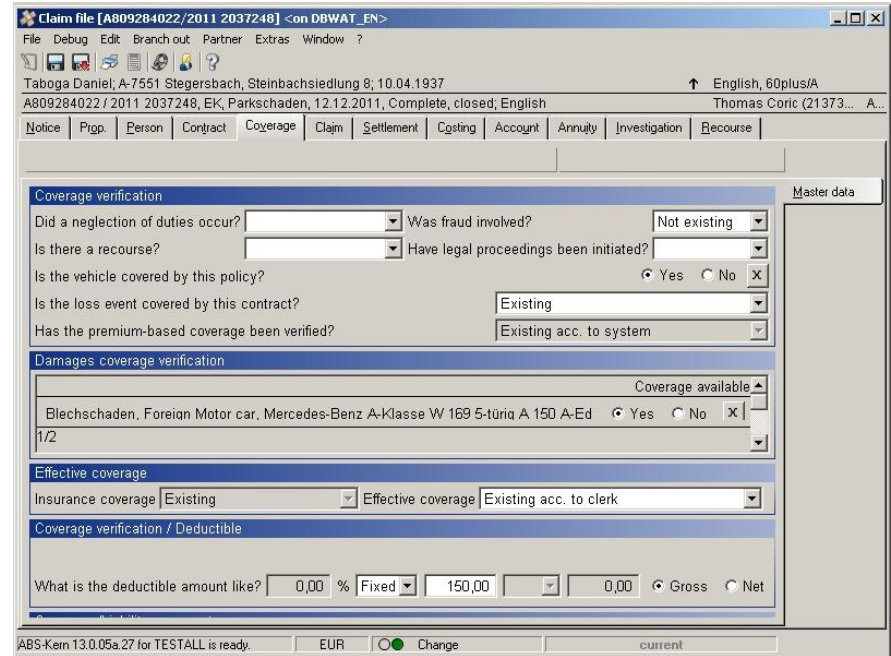

Details of breach of obligation and suspected fraud

Check whether event/person/object is insured in the contract.

Check for:
Premium-based coverage
Coverage amount
Contractual coverage

Documentation of the coverage result

Performing liability/deductible check and entry of coverage/liability comment

The screenshot displays the 'Claim file' window for file A809284022/2011 2037248. The 'Coverage' tab is active, showing various verification fields. The 'Coverage verification' section includes questions about negligence, fraud, recourse, and vehicle coverage. The 'Damages coverage verification' section shows details for 'Bleichschaden, Foreign Motor car, Mercedes-Benz A-Klasse W 169 5-türig A 150 A-Ed'. The 'Effective coverage' section shows 'Insurance coverage' as 'Existing' and 'Effective coverage' as 'Existing acc. to clerk'. The 'Coverage verification / Deductible' section shows a deductible amount of '0,00 %' and a fixed amount of '150,00'. The status bar at the bottom indicates 'ABS-Kern 13.0.05a.27 for TESTALL is ready.' and 'EUR'.

Check for premium-based coverage is done by the system, can however be changed by the clerk. In the coverage result area, insurance protection is determined by the system, total coverage is always finally determined by the clerk.

Settle

What happens in the settle step?

Settle	Activities during the documentation, calculation and payment of settlement or compensation amount
	Creation of assignments for settlement with external service providers (invoice, payment request, expert opinion, audit, etc.)
	Documentation, evaluation and payment of entitlements in relation to the claim
	Creation of settlement letter to the policy holder or other persons entitled to claim
	Adjustment of provision based on the calculated payment amounts.
	Input of annuity agreements
	Creation of recourse agreements

Data are entered in the top tabs:
Claim, settlement, costing, and account

Top tab “Claim”

What information can be obtained from the claim overview?

General claim data

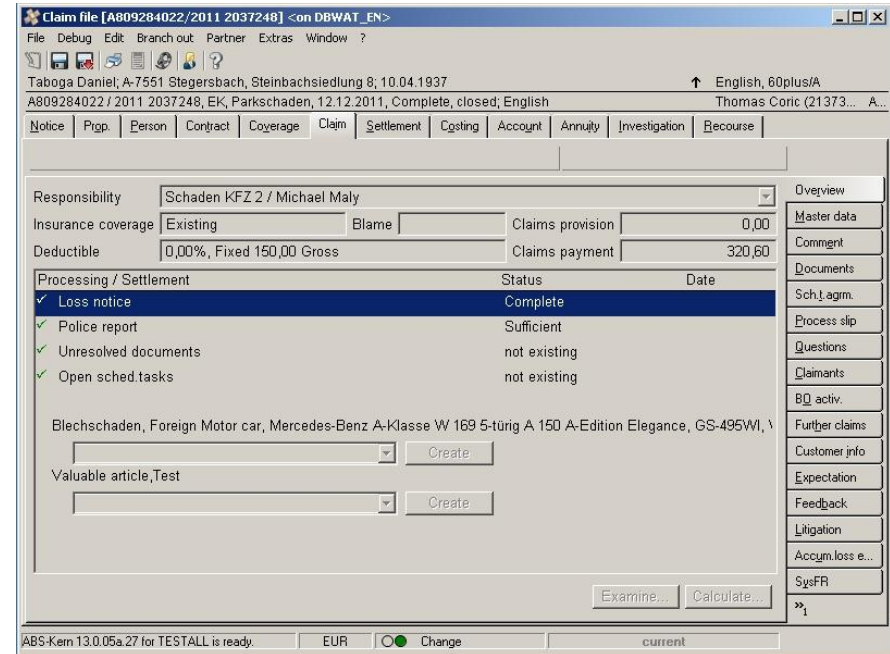

Information about processing status, open documents, scheduled task, comments,...

Side tab “Overview” is starting page for an existing claim.

Starting point for the creation of:

- Invoices
- Expert opinion
- Payment requests
- Cost estimates

Serves quick branch out to remaining work steps

Central control of claim handling process is via the claim tab. It contains information about work status, outstanding work steps, assignments,... On completion of processing claim is closed here (Side tab “Master data”)

Assignment types – payment request, cost estimate, invoice, expert opinion

Which assignment types can be distinguished?

Payment request	To document payment requests received from a customer (e.g. personal contribution, material costs)
Cost estimate	To document received external cost estimates which were not created by Allianz business partners.
Invoice	To document received invoices, which were not created by Allianz business partners.
Expert opinion	To document received external expert opinion, which were not created by Allianz business partners.

▶ Assignments serve as basis for payments.

Top tab “Settlement” 1/2

How can assignments be created?

Settlement activities of the claim

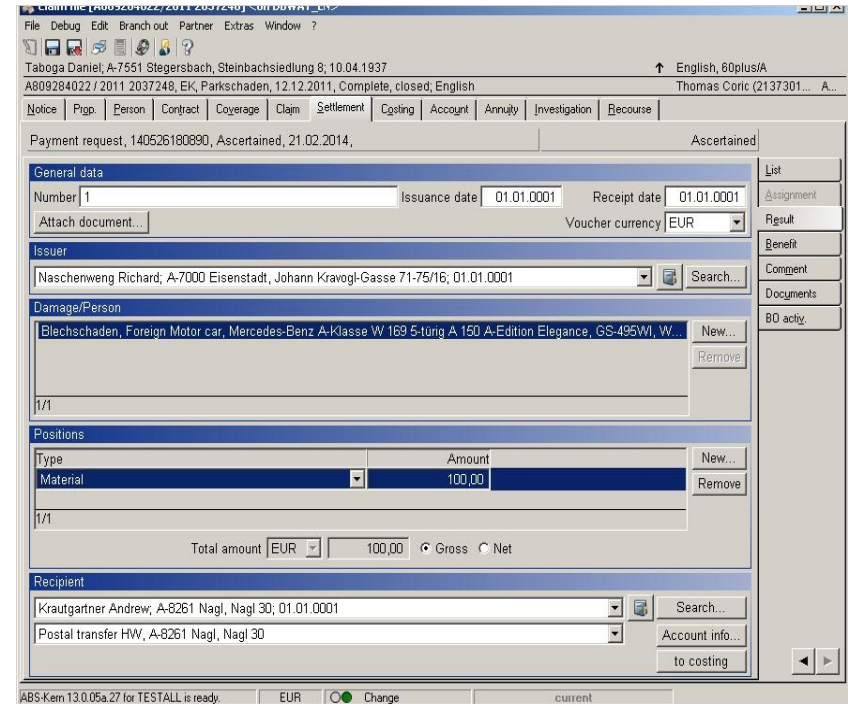

Settlement maps necessary activities of the claim.

Processing of assignments:

- Invoices
- Expert opinion
- Payment requests
- Cost estimates

Depending on the assignment type, detail data are made available for input.

Entered data present basis for calculation.

The screenshot displays the 'Settlement' tab in the Allianz ABS software. The interface includes a menu bar (File, Debug, Edit, Branch out, Partner, Extras, Window, ?) and a toolbar. The main area shows claim details for 'Taboga Daniel, A-7551 Stegersbach, Steinbachsiedlung 8; 10.04.1937'. The 'Settlement' tab is active, showing a 'Payment request, 140526180890, Ascertained, 21.02.2014'. The 'General data' section includes fields for 'Number' (1), 'Issuance date' (01.01.0001), 'Receipt date' (01.01.0001), and 'Voucher currency' (EUR). The 'Issuer' section shows 'Naschenweg Richard, A-7000 Eisenstadt, Johann Kravogl-Gasse 71-75/16; 01.01.0001'. The 'Damage/Person' section lists 'Blebschaden, Foreign Motor car, Mercedes-Benz A-Klasse W 169 5-türig A 150 A-Edition Elegance, GS-495W, W...'. The 'Positions' section shows a table with 'Type' (Material) and 'Amount' (100,00). The 'Recipient' section shows 'Krautgartner Andrew, A-8261 Nagl, Nagl 30; 01.01.0001'. The bottom status bar indicates 'ABS-Kern 13.0.05a.27 for TESTALL is ready.' and 'EUR'.

In ABS, assignments are mapped as own Functional object with a business process status.

Top tab “Settlement” 2/2

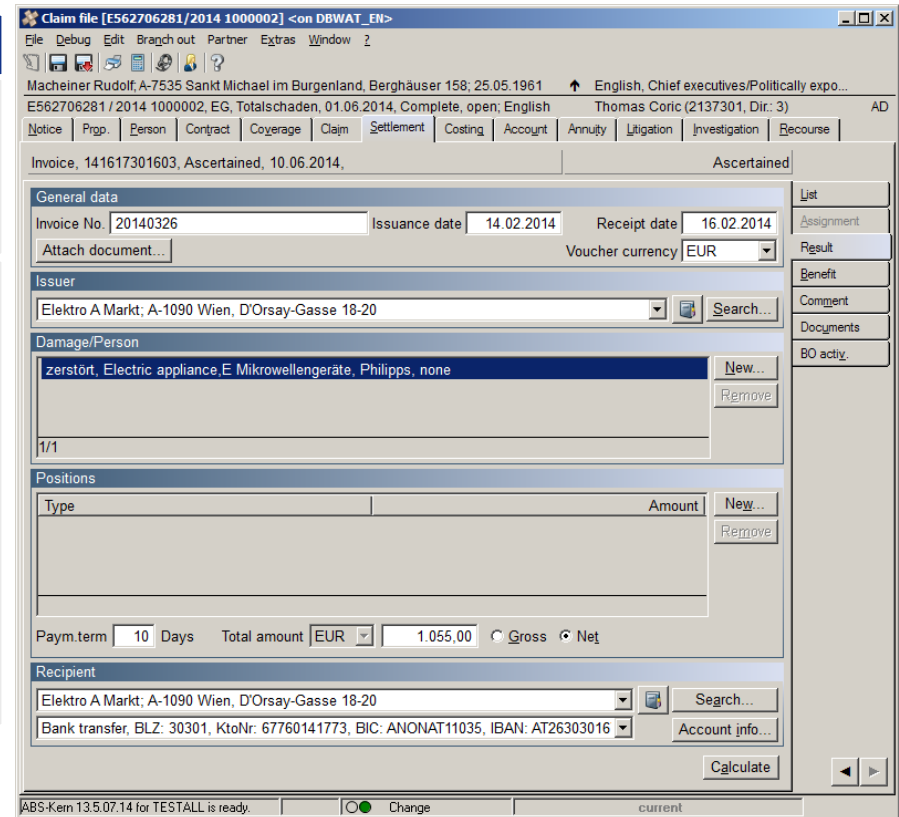

How can assignments be created?

Example of assignment type “Invoice”

Invoices are particularly important for the claim, since payments are processed based on them

Generally, following data are documented:

- Invoice number
- Issuer
- Key date-related conversion of foreign currency into domestic currency and vice-versa
- Invoice items
- Recipient and bank details

The screenshot displays the 'Claim file [E562706281/2014 1000002] <on DBWAT_EN>' window. The 'Settlement' tab is active, showing details for an 'Invoice' assignment. The 'General data' section includes the invoice number '20140326', issuance date '14.02.2014', receipt date '16.02.2014', and voucher currency 'EUR'. The 'Issuer' is 'Elektro A Markt; A-1090 Wien, D'Orsay-Gasse 18-20'. The 'Damage/Person' section shows 'zerstört, Electric appliance, E Mikrowellengeräte, Philipps, none'. The 'Positions' table is empty. The 'Paym. term' is '10 Days' and the 'Total amount' is 'EUR 1.055,00'. The 'Recipient' is 'Elektro A Markt; A-1090 Wien, D'Orsay-Gasse 18-20' with bank details 'Bank transfer, BLZ: 30301, KtoNr: 67760141773, BIC: ANONAT11035, IBAN: AT26303016'. The status is 'Ascertained'.

In addition to the “Invoice”, Core provides the assignment types “Expert opinion”, “Payment request”, and “Cost estimate”. If required, assignment types can also be extended customer-specific.

Top tab “Costing”

How are payments calculated?

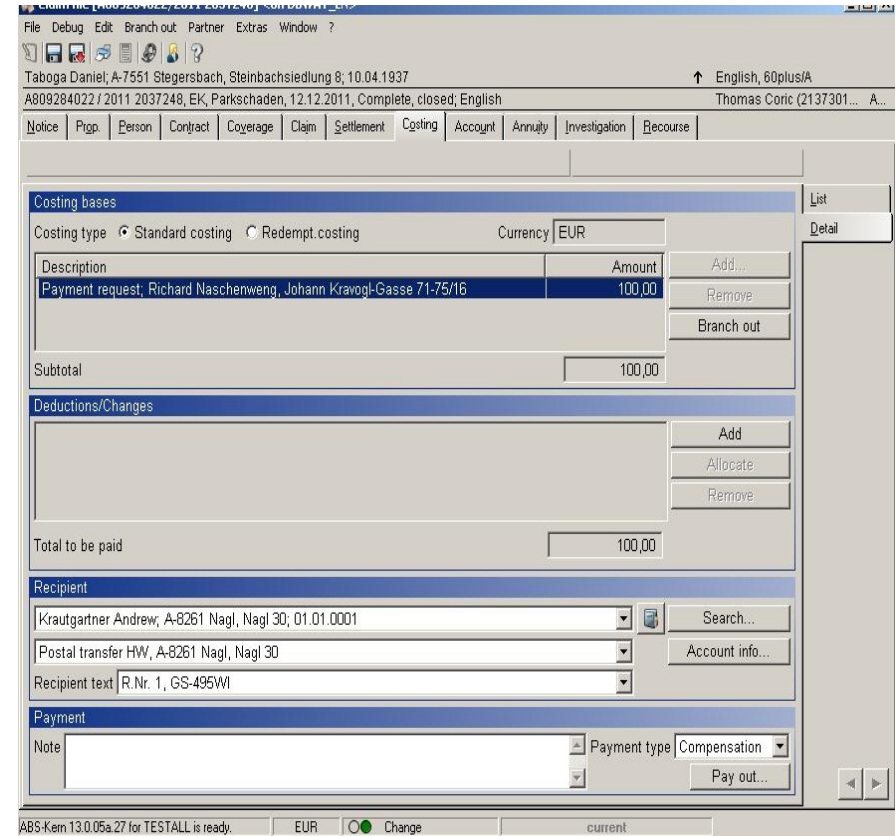

Calculation of claims

Summary of several invoices into one payment can take place via “calculation”

Input of comprehensive deductions like e.g. partial debt, advance payment or excess.

Selection of payment type like e.g. compensation, costs, goodwill

Selection of payment recipient and change in preset recipient text automatically with invoice number and data (purpose)

File Debug Edit Branch out Partner Extras Window ?

Top tab “Account”

How can the claim account be displayed?

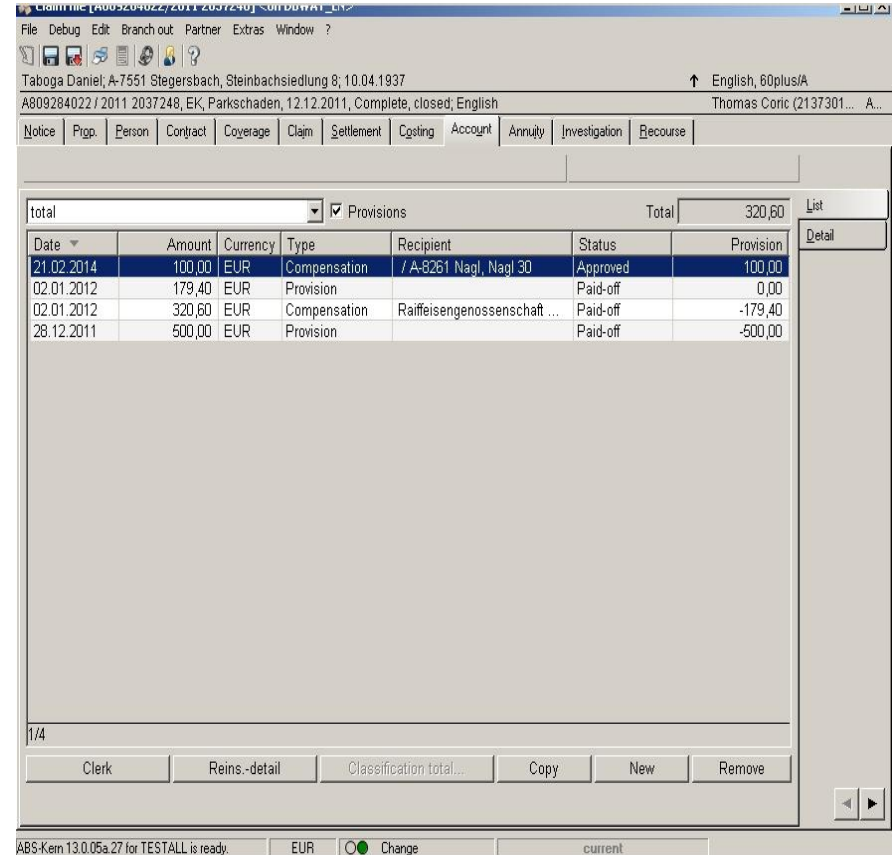

Bookings of the claim

Overview of all cash flows of the claim.
(Provisions, compensations,...)

Display of booking status like e.g. incomplete, approved, booked, paid

Display and processing of detail data including benefits classifications for a claim booking.

Manual creation of bookings

The screenshot shows the 'Account' tab in the Allianz claim handling software. The main window displays a table of bookings with columns: Date, Amount, Currency, Type, Recipient, Status, and Provision. The table is filtered to show 'Provisions' with a total of 320,60. The data includes a compensation of 100,00 EUR on 21.02.2014 and two provisions of 179,40 EUR and 320,60 EUR on 02.01.2012. The status of the bookings is 'Approved' or 'Paid-off'.

Date	Amount	Currency	Type	Recipient	Status	Provision
21.02.2014	100,00	EUR	Compensation	/ A-8261 Nagl, Nagl 30	Approved	100,00
02.01.2012	179,40	EUR	Provision		Paid-off	0,00
02.01.2012	320,60	EUR	Compensation	Raiffeisengenossenschaft ...	Paid-off	-179,40
28.12.2011	500,00	EUR	Provision		Paid-off	-500,00

The interface also includes a menu bar (File, Debug, Edit, Branch out, Partner, Extras, Window, ?), a toolbar, and a status bar at the bottom indicating 'ABS-Kern 13.0.05a27 for TESTALL is ready'.

All bookings for the claim are processed via the claim account. Even bookings, which emerge from an annuity or recourse agreement, are displayed in the claim account.

Conclude

How is a claim concluded in ABS?

Conclude

Input of annuity agreement for automatic payment of annuity payments.

Creation of recourse with appropriate repayment agreement

Eventually law suit ongoing at time of conclusion

Data are entered in the top tabs:
Annuity, recourse, and investigation

Top tab “Annuity”

How can an annuity agreement be created?

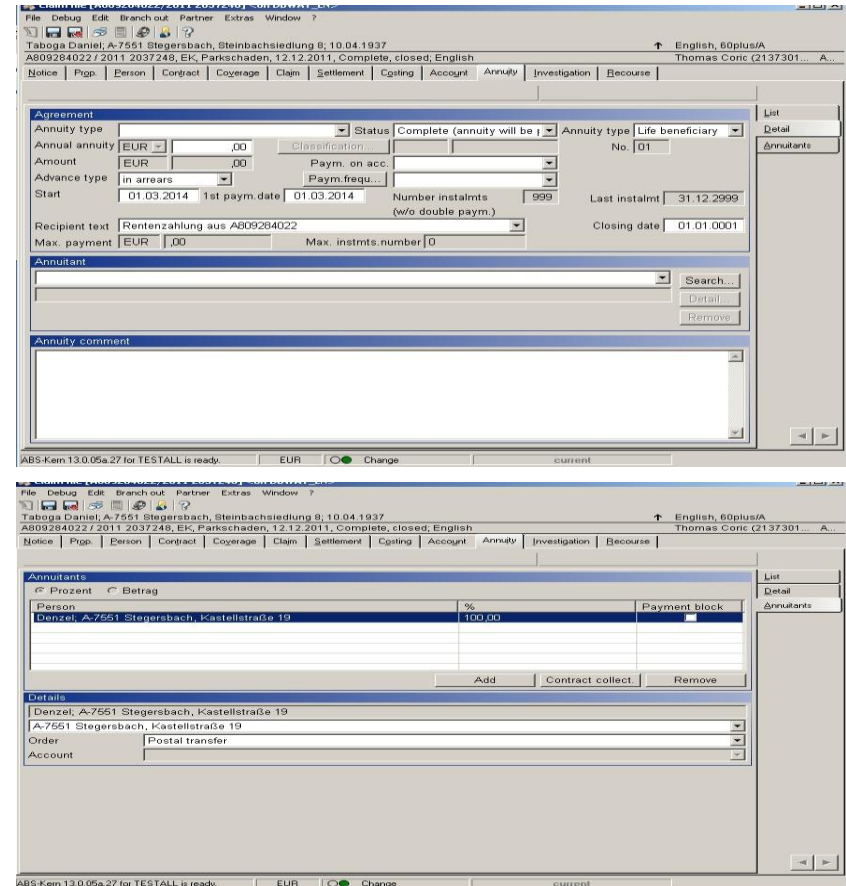

Annuity agreements of the claim

Annuity means recurring payment which can be unlimited or limited in terms of time.

Storage of annuity agreement with:

- Annuity type and class
- Annuity amount (annuity)
- Annuity payment frequency
- Annuity start and duration
- Annuitants

On creating a new annuity agreement, an existing annuity agreement is closed via the closing date.

The screenshot displays the 'Annuity' tab in the Allianz ABS Level I Basic - Claim software. The interface is organized into several sections:

- Agreement:** Contains fields for 'Annual annuity' (EUR 0.00), 'Amount' (EUR 0.00), 'Advance type' (in arrears), 'Start' (01.03.2014), '1st paym. date' (01.03.2014), 'Number instalmts' (999), 'Last instalmt' (31.12.2999), 'Closing date' (01.01.0001), 'Recipient text' (Rentenzahlung aus AB09264022), 'Max. payment' (EUR 0.00), and 'Max. instalmts number' (0).
- Annuitant:** Includes a search field and buttons for 'Search...', 'Detail...', and 'Remove'.
- Annuity comment:** A text area for additional comments.
- Annuitants:** A table with columns for 'Person', 'Prozent', and 'Betrag'. The table shows one entry: 'Denzel, A-7551 Stegersbach, Kastellstraße 19' with a percentage of 100.00 and a payment block.
- Details:** Fields for 'Order' (Postal transfer) and 'Account'.

By creating an annuity agreement, no bookings are created directly in the Client. Processing and booking creation (provision and compensation) take place separately through a separate annuity batch.

Top tab “Recourse”

How can a recourse agreement be created?

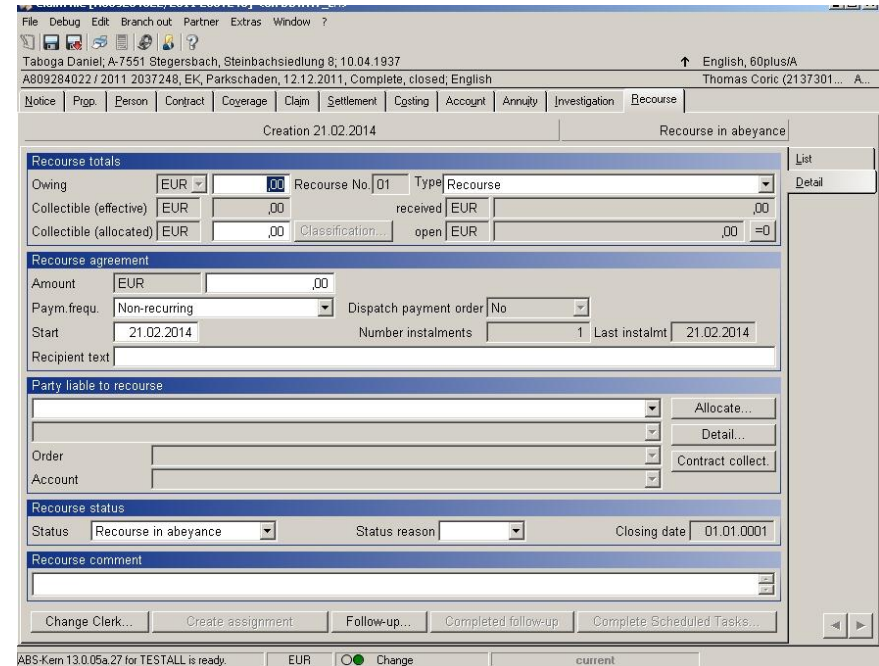

Recourse agreements of the claim

Recourse means refund of already paid services

Storage of recourse agreement with:

- Amount receivables amount
- Recourse type
- (Re-) payment agreement
- Person liable for recourse
- Comments

Several recourse agreements can be created in parallel to the claim. A recourse agreement can be identified as closed via a checkbox.

The screenshot displays the 'Recourse' tab in the Allianz ABS software. The interface is organized into several sections:

- Recourse totals:** Includes fields for 'Owing' (EUR, .00), 'Collectible (effective)' (EUR, .00), and 'Collectible (allocated)' (EUR, .00). It also features a 'Recourse No.' (01), 'Type' (Recourse), and a 'Classification...' button.
- Recourse agreement:** Contains fields for 'Amount' (EUR, .00), 'Paym. frequ.' (Non-recurring), 'Start' (21.02.2014), 'Dispatch payment order' (No), 'Number instalments' (1), 'Last instalmt' (21.02.2014), and 'Recipient text'.
- Party liable to recourse:** Includes fields for 'Order' and 'Account', along with 'Allocate...' and 'Detail...' buttons.
- Recourse status:** Shows 'Status' (Recourse in abeyance), 'Status reason' (empty), and 'Closing date' (01.01.0001).
- Recourse comment:** A text area for additional notes.

At the bottom, there are buttons for 'Change Clerk...', 'Create assignment', 'Follow-up...', 'Completed follow-up', and 'Complete Scheduled Tasks...'. The status bar at the very bottom indicates 'ABS-Kern 13.0.05a.27 for TESTALL is ready' and 'EUR'.

Amount receivables can be created for a claim via a recourse agreement. In this case, related incoming payments to the claim account must be processed in ABS.

Close claim

How is a claim closed in ABS?

Claim closure

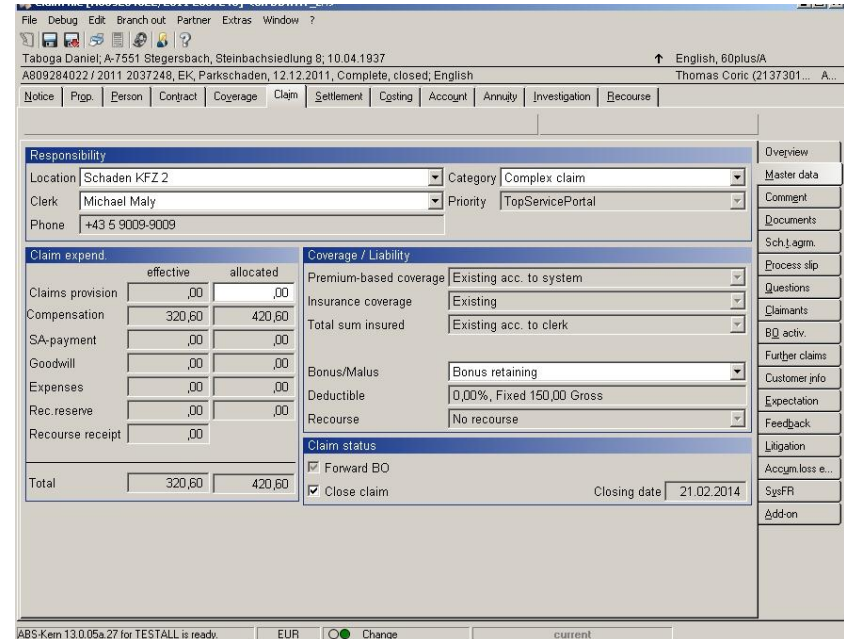

concluding activities after successful claim settlement

Identification of a claim as closed

if required creation of an (automatic) final message

Remaining provision is set to zero (and booked)

Claim closure batch with validations and setting of closure date

The screenshot displays the ABS system interface for claim closure. The main window shows the 'Claim' tab with various fields for claim details. The 'Responsibility' section includes 'Location' (Schaden KFZ 2), 'Category' (Complex claim), 'Clerk' (Michael Maly), and 'Phone' (+43 5 9009-9009). The 'Claim expend.' table shows 'Claims provision' (0.00), 'Compensation' (320.60), 'SA-payment' (0.00), 'Goodwill' (0.00), 'Expenses' (0.00), 'Rec. reserve' (0.00), and 'Recourse receipt' (0.00). The 'Coverage / Liability' section includes 'Premium-based coverage' (Existing acc. to system), 'Insurance coverage' (Existing), 'Total sum insured' (Existing acc. to clerk), 'Bonus/Malus' (Bonus retaining), 'Deductible' (0.00%, Fixed 150.00 Gross), and 'Recourse' (No recourse). The 'Claim status' section shows 'Forward BO' and 'Close claim' checked, with a 'Closing date' of 21.02.2014. The bottom status bar indicates 'ABS-Kern 13.0.05a.27 for TESTALL is ready' and 'EUR'.

Claim expend.	effective	allocated
Claims provision	0,00	0,00
Compensation	320,60	420,60
SA-payment	0,00	0,00
Goodwill	0,00	0,00
Expenses	0,00	0,00
Rec. reserve	0,00	0,00
Recourse receipt	0,00	
Total	320,60	420,60

Closed claims can be reopened provided subsequent processing is still required

Quality assurance

What are the quality assurance options?

Quality assurance

All activities required for checking and correct processing of a claim.

Approval of eventual (stochastic) process slips

Quality assurance of processing through Open-File-Review und Closed-File-Review

Use of stochastic escalation in ABS

Claims are escalated to ensure quality processing

Escalation probability can be defined per interval of the payment amount

Claim-specific definition of the process slip follows in the defining data

Validation must be done by an employee with appropriate authorization

Number of claims escalated due to loss amount

approx. < 1 K	~ 2 percent*
approx. 1 - 3.6 K	~ 5 percent*
approx. 3.6 - 7 K	~ 10 percent*
approx. > 7 K	~ 33 percent*

Unless approved by an authorised clerk, escalated claim bookings with the “withheld” status wait and are not processed further.

Systematic file control

What are the quality assurance options?

Open File Review (OFR) / systematic file control

Configuration of questions for claim processing at fixed escalation points (documentation, coverage/liability check, payment, processing) is done for the product. Maintenance takes place via PEX.

Systematic escalation of claims based on defined criteria.

Questions regarding a claim are replied cumulative by the team leader.

Serves identification of deviations of a clerk from the standard process

Closed File Review (CFR) / claim data analysis

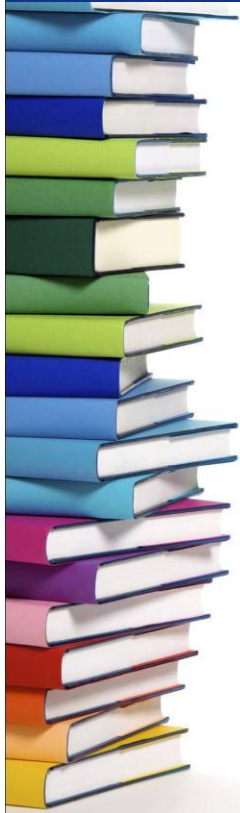

Check of representative sample of closed claims by a check instance

Serves improvement of standard process

Any incorrect processing or options for process improvement within claim processing are identified quickly in ABS through ongoing supervision arrangements.

Classification in the data model

How is classification done in UDM?

Functional object Claim - extract from the data model

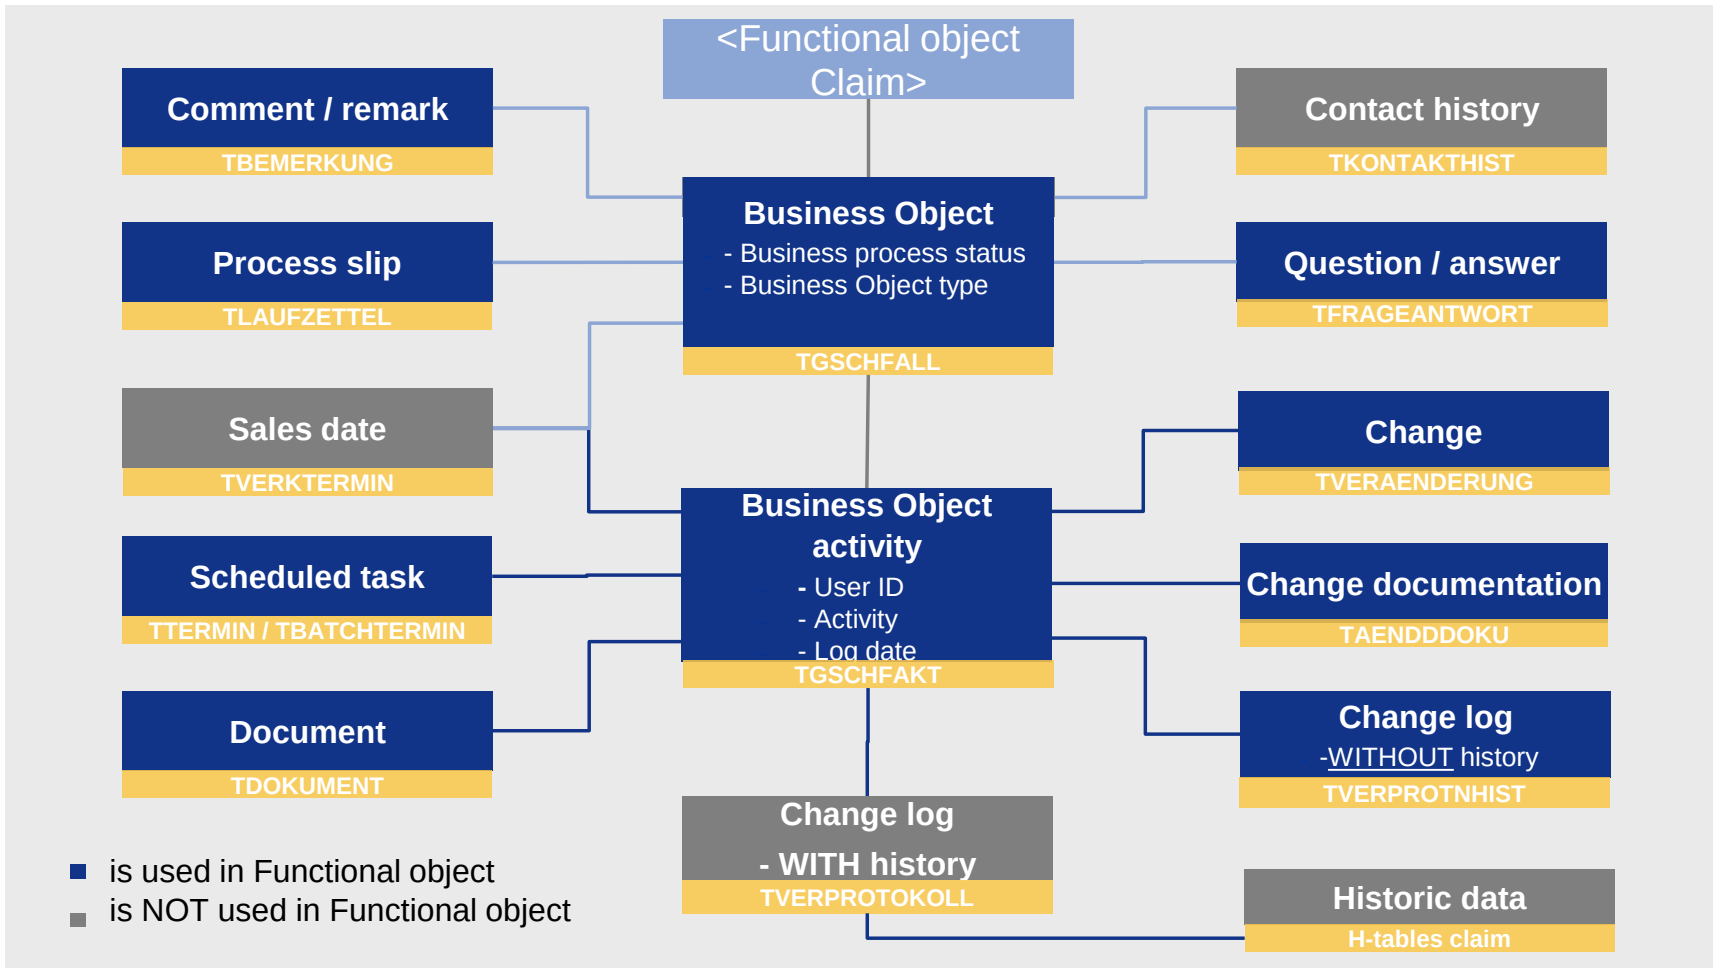

Which tables contain Functional object claim?

Claim-relevant information is stored in different technical tables. The central table is TSCHADEN. Amongst others other policy number, date of damage, loss type and cause, coverage result and closing date are stored there.

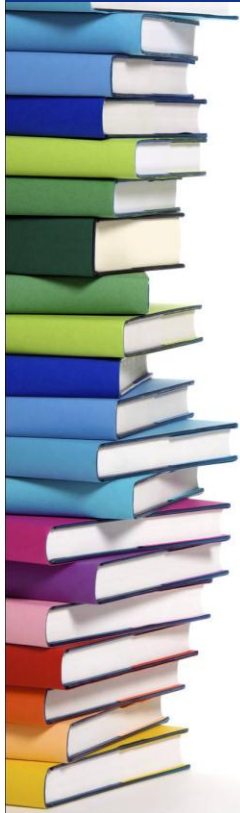

Business Object functionalities

How are the tables of the Business Object connected to each other?
